Sand & Kevlar Defender Gloves

Defender gloves are made from quality genuine leather and are fully lined with high resistance Kevlar for slash protection

These are used extensively by security services, door staff, Council Trading Standards, Environmental Health and Enforcement teams world wide

As well as the high protection offered by the leather and Kevlar, these gloves are filled with fine sand in the knuckle and upper finger region, which has been shown to reduce the risk of fractures by up to 99%.

With your hands protected from blows the full Kevlar lining also provides an excellent slash resistance, from sharp objects like glass or blades; offering another stage of protection for your hands

The gloves fasten via fully adjustable Velcro cuffs, and are available in five sizes: Small, Medium, Large, X Large, and XX Large.
