

VESTGUARD UK

DATA SHEET

US Two Wire Acoustic Tube with Mic & Two PTT

This VestGuard US Two Wire Acoustic Tube Kit is a superior quality Earpiece.

This Earpiece is constructed from highly robust plastic, used on the PTT's transducer and connections, and durable rubber coated wires for flexibility and resilience.

Sounds are received by the enclosed microphone and transmitted at high quality. Sounds received are amplified by the transducer at high quality and improved by the acoustic tube for clear sounds. The surgical earbud also condenses the sound and decreases any background noise.

The earpiece features two PTT's, one for attaching to the belt and the other to be either held, attached to the body, or kept away from view to be used discreetly.

This Earpiece is available for all major radios, including: Kenwood, Motorola, Standard/Icom
