

Versatile Overt Tactical Vest (VOTV)

Description

The Versatile Overt Tactical Vest (VOTV) is a modular, lightweight tactical vest developed by VestGuard in close cooperation with government agencies. The system provides greater ballistic protection and improved ergonomics over the OTV.

The VOTV represents the latest in versatile next generation body armour available from VestGuard. The redesigned system is compatible with all auxiliary components (collar protector, throat protector, bicep protector and groin protector) and is also compatible with Hard Armour Protective Inserts (HAPI) as well as Side Armour Inserts (SAI). Included with the package are three carriers, overt, covert tactical and covert.

The system provides a number of features that improve both wearer comfort and overall performance compared to the previous OTV. In addition to reducing the total system weight, VestGuard UK also incorporates enhanced ballistic coverage while improving fit, ergonomics and user mobility.

Features

- o Available in 11 sizes, including "long"
- o Increased ballistic coverage area
- o Ergonomic panel design
- o Full shoulder protection
