Wireless Communication

Component	Description
Neck Loop	Neck-loop Inductor For use with all wireless earpieces. Detachable cable with choice of connector to fit Motorola, Kenwood, Standard, Icom, Yaseu, Maxon and many more. Unterminated cables are available
Ear Bud Receiver	Miniature ear canal inductive receiver for use with security and public safety applications. Fitted with removal wax guard and 5 spares and removal insertion tool. Active (whispers to let you know it is in radio contact still) For maximum covertness custom molded ear receivers are also available. For these we require a mould to be taken from the users ear, and then the receiver is manufactured using this mould, which will ensure maximum comfort and concealment for the user. Contact us for more details on this 01702 346660
PTT Mike & Connector	Plugs into Neck Loop enabling ability of two way transmission Via Push To Talk method. Available for Motorola fitting, Kenwood, Standard and Icom and various other radios.

Our Ear Bud Receivers can be fitted with a DCR (Dynamic Range Control) that provides an output of 85dB reducing the possibility of hearing damage to long-term users. This complies with the requirement first action requirement first action for exposure noise.

No minimum order value.

Carriage: next day, price on application (standard rates apply).

All prices quoted, pounds Sterling, ex-VAT and are subject to change
